***THE IDEAL FILTER
FOR NATURAL
LIGHT***

***With MASTERSHADE™
SCREENS***

The MASTERSHADE™ SC2000 screen system from Sunair® is the perfect solution for maintaining shade and comfort in your home or office. The Mastershade™ dramatically decreases heat and glare caused by the sun. The Mastershade™ is the ideal solution for solar protection, shading, or total black out by controlling or blocking the sunlight that penetrates your windows and doors. Our shades also protect your furniture, curtains, and floor coverings. Imagine sitting at your computer or watching TV without being disturbed by too much sunlight, and still having a view of the outside.

The Mastershade™ is available in hundreds of fabric colors, and seven standard frame colors (Custom frame colors available upon request). The Mastershade™ is operated by either a motor or manual controls.

Enjoy sun when you want it and shade when you need it with a Mastershade™ screen system. The Mastershade™ will significantly reduce indoor temperature while lowering cooling costs by blocking the sun before it enters your home. Our fabrics effectively block up to 90 % of solar heat rays when installed on the exterior of the window. Depending on the type of fabric used, you may realize a potential reduction in air-conditioning costs.

The Mastershade™ SC2000
Max width 14 ft.
Max drop 12 ft.

Note: Max drop depends on width.

SUNAIR® only offers the best mesh and acrylic fabric for your screen. There are different mesh choices in fabrics available thanks to their exceptional transparency and sun blocking capabilities. Ask your SUNAIR® dealer which mesh fabric is best for your application.

EXTERIOR SCREEN FABRICS

Mesh vs. Acrylic Introduction

SUNAIR® offers the best mesh and acrylic fabric for your screen. More often a mesh fabric is needed because the customer desires solar protection, and still maintaining a view out of the window when the shade is lowered. Sunair® offers mesh fabrics from both Mermet, and Ferrari. Both Mermet and Ferrari are mesh fabrics that offer both exceptional transparency and sun blocking capabilities.

Ask your SUNAIR® dealer which mesh or acrylic fabric is best for your application.

Acrylic solid & stripes

Darker vs. lighter mesh colors:

Because darker colors absorb light, darker colors like Bronze, Black, and Charcoal will allow better visibility through the closed fabric screen to the outside. This is important if you desire to have a nice view of the exterior through the screen fabric when it is extended. Darker colors also offer better solar protection than lighter colors.

Lighter colors are more neutral on the house, but will offer less solar protection and reflect more light. Lighter colors are therefore harder to see through when the screen is lowered.
